

# EonStor® SAS-to-SATA Series RAID Subsystem

Successors to SCSI-host Storage with  
Unrivaled Price/Performance Ratio

## OVERVIEW

The SAS-to-SATA series features extraordinary capacity-footprint and cost-per-GB ratios with no compromise on data protection. Coming in a cableless, backplane-based enclosure, the subsystem is driven by redundant, hot-swappable component pairs whose operation statuses are constantly available via comprehensive interfaces such as LCD screen, firmware utility, telnet console, browser-based or Java-based RAIDWatch software. Behind the robust hardware lies a firmware core that sums a decade of storage development. And hence the subsystem is at ease with all sorts of faults that might jeopardize RAID storage stability, be it related to thermal, hard drive behaviors, or sensitive application characteristics.

## APPLICATIONS

Infortrend products are widely applied in disk-to-disk backup, server-attached and network data storage and in major industries such as data-mining, medical imaging, security/CCTV, and digital media including video-on-demand, stream editing and more.
